## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 14-17, drawn to an apparatus for use in a labeling machine, said apparatus being capable of carrying a predetermined quantity of selected coded labels used to label fruits and/or vegetables, said coded labels identifying a specific type of fruit or vegetable, classified in class 705, subclass 1.
- II. Claim 18-23, drawn to an internet based method for ordering and supplying selected coded labels to be applied to a variety of fruits and/or vegetables at a plurality of labeling sites, classified in class 705, subclass 26.
- III. Claim 24, drawn to a method for applying a plurality of different coded labels to a variety of perishable fruits and/or vegetables wherein each of said different coded labels is carried on a label roll mounted on separate cassette, classified in class 700, subclass 235.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one

Art Unit: 3627

subcombination is separately usable. In the instant case, subcombination I has separate utility such as an apparatus for use in a labeling machine, said apparatus being capable of carrying a predetermined quantity of selected coded labels used to label fruits and/or vegetables, said coded labels identifying a specific type of fruit or vegetable and subcombination II has separate utility such as an internet based method for ordering and supplying selected coded labels to be applied to a variety of fruits and/or vegetables at a plurality of labeling sites and subcombination III has separate utility such as a method for applying a plurality of different coded labels to a variety of perishable fruits and/or vegetables wherein each of said different coded labels is carried on a label roll mounted on separate cassette. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons

Art Unit: 3627

given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

**Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.**

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to

Art Unit: 3627

petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
